

QUOTE

The electrical installation for the charging infrastructure will be carried out in accordance with Low Voltage Regulations and ITC-BT 52. Said technical instruction defines the minimum provisions of the installation, schematic diagrams, general requirements and necessary safeguards.

In compliance with Low Voltage Regulations and the ITC (Supplementary Technical Instruction), we estimate installation budgets of €1,600 and €1,100 in communal garages and single-family homes respectively (VAT and Charge Point not included). These values are indicative and may vary according to the type of installation.

Our authorised installers will visit you to study your particular case and advise you as to which solution best suits your needs. Once we have their approval, we will send you a no-obligation installation quote.

Irrespective of the installation, Iberdrola Clientes will bill you for the Charge Point to the sum of €490 (VAT not included).
